PLANT CARE INFORMATION

Mexican Grass Tree

Dasyllirion (longissimum) quadrangulatum

DESCRIPTION: This beautiful plant is related to our native Desert Spoon. As they mature, they slowly form a trunk to 10 feet tall, and are crowned with a 6' to 8' rosette of narrow green leaves. The flexible, unarmed leaves ¼ wide by 3-4' long, occur in whorls around the trunk. Older, established plants produce 10 to 12 foot tall flower stalks annually. Mexican Grass Tree is native to Mexico.

RECOMMENDED USE: Great as an accent or specimen, for its form in an enhanced desert landscape or xeriscape. Can also be used in a large patio container. Mexican Grass Tree is a spectacular accent plant that blends well in either tropical or arid gardens.

CULTURE:

Hardiness: hardy to 15° F.

Sun tolerance: It is adapted to exposures ranging from full sun to shade.

Watering and feeding: Low water use, but needs regular irrigation. Feed twice yearly.

Soil requirements: Needs good drainage.

Pruning: Old leaves can be pruned off to accentuate the trunk. Plant away from paths to eliminate the need to prune green leaves.
