

## ARIZONA-SONORA DESERT MUSEUM PLANT CARE INFORMATION

### **Lemon Dalea** *Dalea capitata*

**DESCRIPTION:** Lemon Dalea is a low, semi-evergreen groundcover grows quickly to cover an area of 3' but only 8" tall. It has fine textured, light green foliage. Small yellow, pea-like flowers in 3' spikes occur in late spring and fall. Both foliage and flowers are lemon scented. Lemon Dalea is native to Coahuila, Mexico. It is often sold commercially as "Sierra Gold"<sup>TM</sup>. results.

**RECOMMENDED USE:** Because of its compact size and tolerance to reflected heat, Lemon Dalea is often used in tight planting areas, such as parking lot planters or street medians. Rabbits seem to avoid the bright green, fine-textured, aromatic foliage.

## CULTURE:

**Hardiness:** Hardy to about 5° F, but loses leaves at about 25° F.

**Sun tolerance:** Plant in full sun. The bloom is also better in sun than in shade.

**Watering and feeding:** Water use is low once established, but in hot desert regions this plant requires some supplemental irrigation from spring to fall. Feed twice a year with a complete fertilizer.

**Soil requirements:** No soil amendments should be necessary, but Lemon Dalea needs good drainage.

**Pruning:** Cut back in late winter for fast recovery in warm weather.
